## MIDIjet Wireless MIDI Kit

### Description

Eliminate cable troubles! MIDI Works proudly introduces the MIDIjet wireless MIDI adapter. MIDIjet connects any two pieces of MIDI gear. It is designed for situations where laying MIDI cables is undesirable.

Two adapters are included in every kit. As easy to use as standard cables, all that's required is to connect an adapter at both ends of your gear - such as one adapter on a keyboard, the second on a sound module. Up to 64 MIDI connections can be made in the same environment using unique radio channels, selectable via switches. The units are powered by either 2 'AA' batteries or a DC adapter.

### Applications

MIDIjet is designed to replace standard MIDI cables in situations where cables are visually unpleasant, or awkward to connect.

MIDIjet is best suited to home environments for connecting music equipment separated by short distances, where hiding cables can be aesthetically important in a multi-purpose room.

For portable instruments, live environments and long distances, MIDIjet Pro is recommended.

### Features

- o 30-foot maximum range in environments with no obstructions
- o Kit includes all that's required to connect two MIDI devices - two adapters, 2 'AA' batteries, and 1 DC power supply included in every box
- o Each MIDI Adapter powered by either DC power supply or 2 'AA' batteries
- o Operate up to 64 adapter pairs at the same time
- o Low latency
- o 20-hour battery life (using NiMH batteries)
- o Operates on 2.4 GHz license-free band
- o Gracefully handles signal drop out - no notes stuck on
- o Low Battery and Link display indicators
- o Measures 2.6" x 1.1" x 4.4" (w x h x d), and weighs 6 oz with batteries
