MIDIjet Pro Long Range Wireless MIDI Kit

Description

Eliminate cable troubles! MIDI Works proudly introduces the MIDIjet Pro wireless MIDI adapter. MIDIjet connects any two pieces of MIDI gear. It is designed for live performances or any other situation where laying MIDI cables is undesirable.

Two adapters are included in every kit. As easy to use as standard cables, all that's required is to connect an adapter at both ends of your gear - such as one adapter on a keyboard, the second on a sound module. Up to 31 MIDI connections can be made in the same environment using unique radio channels, selectable via switches. Powered by either 2 'AA' batteries or a DC adapter, it is well suited to both live event and studio environments.

Applications

MIDIjet is designed to replace standard MIDI cables in situations where cables restrict performer mobility, are visually unpleasant, or awkward to connect.

In live performance environments, MIDIjet liberates a stage floor of MIDI cable clutter. It is also ideal for connecting music equipment in home studios, where hiding cables can be aesthetically important in a multi-purpose room.

Features

- o 500-foot typical range
- o Kit includes all that's required to connect two MIDI devices - two adapters, 2 'AA' batteries, and DC power supply included in every box
- o Each adapter powered by either DC power supply or 2 'AA' batteries
- o Operate up to 31 adapter pairs at the same time
- o Low latency
- o 30-hour transmitter battery life (using alkaline batteries)
- o Operates on 2.4 GHz license-free band
- o Gracefully handles signal drop out - no notes stuck on
- o Low Battery and Link display indicators
- o Measures 2.6" x 1.1" x 4.4" (w x h x d), and weighs 6 oz with batteries
