CLASSIC 'AGO' MIDI PEDALBOARD

Description

Your search is over! Finally, a MIDI pedalboard developed by organists for organists! Classic Organ Works is pleased to offer the Classic 'AGO' MIDI pedalboard. This MIDI pedalboard has been designed to the exact specifications of the American Guild of Organists. This beautiful, deluxe, wood-veneer pedalboard uses a combination of heel and toe springs to produce an authentic organ pedalboard feel.

Although designed and constructed using the classical methods of organ-builders, the Classic 'AGO' MIDI pedalboard is a technologically-advanced musical device. The pedalboard magnetic reed switches connect to the Classic MIDI Keyboard Scan Computer (MKSC-4). The electronics on this board perform MIDI-merge, transpose (up one octave and back to default), and selectable MIDI-channel output functions. Thus, multiple MIDI devices may be chained together to produce a single MIDI output stream. The transpose function allows organists to select their preference for the starting pitch associated with the first pedalboard key. A selectable MIDI channel output allows transmission of MIDI information on any one of sixteen standard MIDI channels.

The Classic 'AGO' MIDI pedalboard is shipped fully assembled and requires only MIDI and power connections. MIDI devices are connected to the 'MIDI IN' and 'MIDI OUT' connectors using a standard MIDI cable.

Features

- Engineered to the exact specifications of the American Guild of Organists for a 32-note pedalboard.
- Concave and radiating.
- Measures 53 ½" (front width) x 37 ½" (back width). The middle 'E' key is 5" above ground level.
- Selectable output MIDI channel (1-16).
- 'MIDI merge' function for convenient connection of multiple MIDI devices.
- Octave transpose function (one up and back to default).
- Diagnostic LED.
- Heel and Toe springs for 'best feel'.
- Equipped with magnetic reed switches.
- Includes MKSC-4 (MIDI Keyboard Scan Computer) board.
- Fully assembled and ready to be connected to MIDI devices.
- Power is supplied using an included DC wall adaptor.

Applications

The Classic 'AGO' MIDI pedalboard is ideal for organists and organ enthusiasts. It may be used as a practice device in a church setting, but is normally for home purposes. The Classic 'AGO' MIDI pedalboard provides the spacing, feel, and look of a church pedalboard. Much like practicing and performing on the same violin, organists can gain the experience of playing on a performance pedalboard in the privacy of their home.

Organ enthusiasts no longer need to spend countless months searching and repairing an old pedalboard for their home organ masterpiece. The Classic 'AGO' pedalboard provides the look and feel of an authentic organ pedalboard. With the addition of Classic MIDI keyboards (CMK) and a sound module, an inexpensive and impressive home organ can be created to entertain family and guests. The Classic 'AGO' MIDI pedalboard allows musicians to express their talents both musically and aesthetically!
